

REPORT OF BULK SAMPLE ANALYSIS FOR ASBESTOS

TESTED FOR: PSI, Inc.
850 Poplar Street
Pittsburgh, PA 15220
Attn: Doug Finke

Project ID: 08164418
Fox Chapel
Kerr Elementary

Date Received: 6/25/2020 Date Completed: 6/26/2020 Date Reported: 6/26/2026

Analyst: Dan Anderson Work Order: 2006554 Page: 1 of 2

Table with 5 columns: Client ID, Lab ID (Layer), Sample Description (Color, Texture, Etc.) Analyst's Comment, Asbestos Content (Percent and Type), Non-asbestos Fibers (Percent and Type). Rows 01-16 show consistent results: NO ASBESTOS DETECTED and 3% Cellulose Fiber.

Quantitation is based on a visual estimation of the relative area of bulk sample components, unless otherwise noted in the "Comments" section of this report. The results are valid only for the item tested as received. This report may not be used to claim product endorsement by NVLAP or any agency of the U.S. Government. Method used: E.P.A. Interim Method for the Determination of Asbestos in Bulk Insulation Samples (EPA 600/M4-82-020). Polarized Light Microscopy is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative Transmission Electron Microscopy is currently the only method that can be used to determine if the material can be considered or treated as non-asbestos containing. Samples will be disposed of within 30 days unless notified in writing by the client. No part of this report may be reproduced, except in full, without written permission of the laboratory. The reporting limit is 1% by weight. NVLAP Lab Code 101350-0.

Respectfully submitted,
PSI, Inc.
