

Understanding the Edgenuity/FCAO Progress Report

Grades for online courses are calculated in three ways. As you look at your child's progress in Edgenuity you will see:

1. **Overall Grade:** this is the grade for all assignments completed to date.
2. **Relative Grade:** this is the final grade if a final grade were to be given today; it calculates the total grade by putting zeros in all assignments not yet complete. So, if this student were to do no further work, the final grade would be a 5.9%.
3. **Actual Grade:** this reflects the overall grade adjusted for the percentage amount that the student is behind. In this example the actual grade is lower than the overall grade because the percentage complete is lower than the target completion goal.

Grades recorded in PowerSchool for the 9-week grading periods are the *Actual Grade*. **This will not calculate into the final course grade; it is a report of progress only.** The final grade, at the end of the 18 weeks (high school) or 36 weeks (middle school) is taken from the *Relative Grade*.
